

StratusStation E-Lert Mobile

StratusStation E-Lert Mobile is a specialized, portable surveillance unit designed for on-scene monitoring of a hazardous materials incident or a long-stay event. **E-Lert Mobile** provides a wireless link from the camera and weather station instruments back to the also included laptop workstation. From the workstation, you have full control of the camera movement and zoom capabilities along with a host of real-time weather readings including wind speed and direction.

StratusStation E-Lert Mobile can be set up and operational in under five minutes in order to give you fast and reliable footage and data from the safety of your mobile command center. **E-Lert Software** allows full recording of video and weather data for later review and discussion. This offers excellent training footage as well as post-event critique materials. **E-Lert Mobile** comes packaged in a hard-shell rolling case for storage on your mobile command center.
